**ANNOUNCEMENT BY NEW TALISMAN GOLD MINES LIMITED
(NZX: NTL, ASX: NTL)
FOR IMMEDIATE RELEASE**

OHINEMURI RIVER DISCOLOURATION

On Friday 23rd in the afternoon a section of the Ohinemuri river in the Karangahake gorge became discoloured with a sediment. The Waikato Regional Council (WRC) has satisfied itself as to the source of the material that has flushed into the river from old disused workings in the conservation park. The discolouration has dissipated rapidly and even the water in the area of the source appears to have now cleared.

New Talisman can confirm that the event is not related to any of its activities. While we will leave the WRC to determine the cause of the material entering the river, New Talisman and its mining contractor Terra Firma have previously engaged with the Department of Conservation (DoC) to assist with making the many historic and disused tunnels in the wider area secure to prevent members of the public entering and endangering themselves. We will renew our efforts with an offer of services to both DoC and the WRC to secure where possible the various historic tunnels and workings.

Yours sincerely,

John Upperton
General Manager
New Talisman Gold Mines Limited
